

Findings:-

Null Values:- Find that there are above than 90% of null values are belong to age and cabin columns

Age:- Maximum number of passengers are between 20-40 age group

Pclass:- the maximum number of passenger which are in between 20-40 are in pclass 1, and 20-35 passengers are in Pclass 2 and other are in Pclass 3

Survived:-

=> almost 50% passengers survived

=> Survived are very correlated to the sex column means rescue team give priority to female 1st

Group or alone:- find that the passenger are in group and alone on the bases of sibsp column if sibsp ==0 so alone and if sisp ==1 group

Interview Questions

Question 1:- What is EDA and why it is important?

Answer:- EDA Stands for Exploratory data analysis is a fundamental approach which is use to understands and insights of data and patterns

Question 2:- which plot do you use to check correlation?

Answer:- for correlation we use many plots like Scatter plots, Heatmap, trend line etc

Question 3:- How do you handle skewed data?

Answer:- skewed data has uneven distributed values so to handle skewed data we use data transformations like log transformation, Square root transformation, quatile transformation etc

Question 4:-How to detect multicollinearity?

Answer:- By using calculation we detect multicollinearity the calculations like Variance inflation factor, correlation metrics and others

Question 5:- what are the univariate, bivariate, and multivariate analysis

Answer:-Univariate analysis focus on a single variable, bivariate analysis focus on two variable and multivariate analysis explore the relationship among three or more variable

Question 6:- Different between heatmap and pairplot?

Answer:- heatmap:- visually represent data magnitude using color variations also show correlation between variable or user interaction,

Pairplot:- display pairwise relationship[between all variable in the dataset

Question 7:- How do you summarize your insights?

Answer:- Focus on identifying the key takeaway the “So what” or implication and present them in a clear ,concise and structure
